Mie University Environmental Strategy

Philosophy

As a center of learning, Mie University strives to contribute towards the “Development of Human Resources and Research,” enhancing the “Welfare of the Society,” through “Harmonious Coexistence of Nature and Mankind.”

Basic Policy

Mie University has five faculties and six graduate schools on one campus. As a “regional innovation university,” actively expanding “higher education for future society” and “various unique academic research”, all the faculty and staff members establish and emotional bond with each other, aiming to develop the “world-class environmentally advanced university” under the strong leadership of the President.

Each of us understands the needs and expectations from students who are affected by University’s activities, private sectors making collaboration with us, and the general public. We aim for the realization of our goal acting on our own initiative with respect for our Admission Policy, Curriculum Policy and Diploma Policy. We clarify the recognition regarding environment, utilize sustainable resources, de-escalate the climate change and preserve biodiversity while conducting our education, research, and regional contribution activities complying with our legal obligation to the environmental acts. We aspire to lead the establishment of sustainable circulating society in harmony with our natural surroundings.

To achieve this environmental strategy, we establish the Environmental Management System and take advantage of our education, research, social contribution, and operational capability to conduct our effort, we formally announce our decision that:

Education
1. We produce students with a far-sighted, advanced environmental knowledge, ethic, and mind.

Research
2. We verify the realization of innovative technology of natural symbiosis, prevention of global warming, utilization of resources and energies on campus and the facilities.

Social Contribution
3. We serve as the base for environmental information working together with community.

Operation
4. We operate the Environmental management System which meets the ISO-14001 requirement to utilize resources and reduce energy consumption.

Mie University publishes this Environmental Strategy to the entire faculty, staff members, students and those involved, and also to general public.

April 1, 2015

Yoshihiro Komada, M.D., Ph.D.
President of Mie University
