

# COP10 in Mie

## Asia and the Pacific Ocean youth biodiversity statement

We are the youth of Asia and Pacific region. This time, we participated in COP10 IN MIE and we went to the Ise Bay and satoyama in Kameyama. Using this experience, we made statement for the sustainable use of the biological resources in Asia, Pacific and even the world.

We have been received a lot of blessing from mountains, rivers, ground sea and nature but, today, biodiversity are being lost by some immigrants by human, global warming associated with climate change and destruction of nature. It is necessary for us to know again that we are a part of the ecosystem and all lives are related each other. Now we should make the specific plan to create the world where all lives in the earth can live together over the countries and act.

Therefore, we declare as follows to create the sustainable world where all lives on the earth harmonize.

1, We put the right knowledge to the right action for biodiversity conservation.

- We grasp a problem of the current state and put on right knowledge of biodiversity for the solution.
- We try to have contact with nature a lot, to realize the importance of nature, and to act responsibly.

2, We try ecosystem not to be destroyed any further.

- We share experience with the people around us when we come back, and we start to preserve regional biodiversity.
- We try to buy the biodiversity-conscious products, and save the water, energy and waste of natural resource in daily life.

3, We will have a global view point, and make the strong Asia Pacific Youth network and then, we must cooperate with them toward a resolution of the issues.

- We should have a lively exchange of views (in Asia Pacific Youth network) to promote biodiversity all over that world.
- We make request each country to access to genetic resources and Benefit Sharing.

4, We will have the vision to future generation and think over, and what's more, we try to keep blessed biodiversity to the next generation.

- We require strengthened Education for Sustainable Development (ESD) to improve the consciousness about biodiversity.
- In the future, we will recognize the importance of continuous biodiversity and maintain this for future generation as a leader in each country.

We aim peace and rich world that profit in each country from genetic resource is fare. We will achieve the world where various species are and human coexist nature by 2050. Our mission is taking over the Earth that having abundant life to generation in the future.

We hang 2050 vision and we send information, cooperate and act with having an environmental leadership to stop decrease in biodiversity.

The whole human family coexists with nature and spends time in happy life. To accomplish this mission, we declare here to make effort.
